

### Mobile Care Station

- Measurements are transmitted wirelessly from the Blood Pressure, BI, Glucose, SpO<sub>2</sub>, and Thermometer devices to the iFORA CS App.
- Patient ID and Operator ID are recorded with the barcode scanner
- Patient records are sent directly from the iFORA CS app to the electronic medical record

**SKU:** 650-000

### Mobile Care Station Training & Manuals

There are device user manuals for each device you choose to use with the Mobile Care Station.

### iFORA Mobile Care Station App

iFORA CS works with ForaCare's Mobile Care Station to provide caregivers an easy-to-use and affordable solution for ward rounds in the hospital. The application records patients' blood glucose, blood pressure, body temperature, and SpO<sub>2</sub> readings, and presents them via a comprehensive user interface to facilitate the management of patient's health data.

During each measurement, the result is transmitted via Bluetooth to the application instantly, making the review of readings from different meter types much easier and saves time for handwriting.
